CONTINENTAL IMAGING AND TECHNOLOGY SELECTS KAULKIN INFORMATION SYSTEMS FOR SaaS-BASED DOCUMENT MANAGEMENT, WORKFLOW AND COMPLIANCE

*Financial Services Industry Focus for Relationship; KISTrack™ Technologies to Support
Compliant Electronic Data Storage, Supervisory Procedures and Best-Practices*

NEWINGTON, CT and ROCKVILLE, MD – January 8, 2009 – Continental Imaging and Technology (CIT), a leader in enterprise content management (ECM), document management and imaging, and Kaulkin Information Systems™ (KIS), a leader in Software-as-a-Service (SaaS) document management, compliance and workflow technologies, today announced a teaming relationship whereby CIT document management/imaging expertise and solution services will be integrated with and marketed jointly with the KISTrack™ SaaS technology platform.

"CIT is a true leader in the financial services market and particularly in the communities of insurance and securities broker-dealers," stated Michael P. Binko, CEO and president of Kaulkin Information Systems. "Keen focus on government/regulatory/compliance (GRC) standards and supervisory best-practices are two of the many areas of expertise that set CIT apart in the market. Working side-by-side with their clients, CIT becomes a trusted member of strategic planning and implementation teams. This is precisely the type of leadership and commitment we look for in channel partners."

Under the terms of the non-exclusive relationship, CIT will offer fully integrated KIS enterprise data management systems in a wide variety of operational applications. These applications include, but are not limited to:

- FINRA/SEC regulatory compliance for broker-dealers and securities firms
- Regulatory audit response and mitigation
- Data-room for dealmakers
- Electronic document management
- Workflow/business process automation
- Human resource management
- Shipping/delivery
- Data management audit-trails
- eDiscovery/legal risk management
- Business continuity/disaster recovery

“Many of our clients have been asking about SaaS-based applications so we started to take a serious look at the leading vendors,” said Seth Braverman, Director of Business Solutions at CIT. “After a six month period of research, due diligence, comparison and competitive evaluations, we chose KIS as our technology provider for SaaS-based compliance, workflow and document management because of their concentration on total cost of ownership (TCO) and return on investment (ROI) in the critical areas of growth management and risk mitigation.”

Beyond simple archiving and monitoring of data, users and business rules, the KIS*Track* platform integrates several application “modules” and packages that have typically only been available individually from SaaS vendors. These modules include:

- TrackFile – document imaging and enterprise data management (archive/search/retrieve)
- TrackFlow – workflow/BPM, compliance, e-discovery, GRC best practices
- TrackMail – electronic messaging surveillance, archiving and violation resolution
- Track Cash – electronic check/transaction processing combined with TrackFile
- TrackBatch – “lingua franca” – methodologies, IP and technologies for data extraction and legacy system integration
- KIS*Track Compliance SWAT Utility*™
- KIS*Track Deal-flow Toolkit*™

Joint CIT-KIS efforts will concentrate on enterprise data management strategies and scalable growth with a bottom-line focus. Whether clients are high-growth broker-dealers, insurance providers, lenders/banks, private equity groups, accounting firms, M&A advisors, manufacturers, engineers, or government entities, CIT and KIS together deliver the most affordable, scalable and comprehensive SaaS solutions.

More detailed information about CIT can be found at <http://www.continentalit.com>. In addition, detailed technology specifications as well as compelling *ROI Benchmark Case Studies* associated with deployments of KIS*Track* are highlighted in white papers available from KIS.
